Executive Overview

Due to recent Hungarian involvement in the ownership structure, Auchan Hungary is now standing in the doorstep of new strategic and operational changes, with more emphasis put on the Hungarian stores' development. With stronger local governance and investment capacity, the company has both the ambition and the resources to redefine the role of the hypermarket within the Hungarian retail landscape.

To transform ambition into reality, Auchan Hungary's leadership team - led by the Country Chief Executive Officer, Géza Vincze and the country Chief Operating Officer, Attila Nagy – is wondering: how can they reinvent the hypermarket format to attract all generations (including Gen Z and Millennials who have growingly different shopping habits nowadays)?

The company is prepared to invest in store renewal, with 2,000–4,000 m² of realistically repurposable space per store. Auchan Hungary is looking for best practices and innovative yet operationally viable solutions that enable the company to be the first mover in fundamentally reimagining physical retail in the Hungarian market. Your consulting team is therefore invited to help Auchan redefine the retail experience using the repurposable space as the engine of hypermarket reinvention. Easter is rapidly approaching, giving the space for redefined layout concepts, and potentially for piloting some of the permanent and scalable changes in the hypermarket experience.

Introduction

Many young adults in Hungary vividly remember the scenario of a Saturday morning, feeling thrilled about the weekend activities to come. For some it was sleeping in, going to sports practice, hopping on games or just immediately going out to play with friends. But there were days, when the program was something else: going shopping with the entire family. Specifically, to the hypermarket, which then was the destination, not merely a stop along the way. Over the past decade, however, retail dynamics have shifted dramatically. Discount chains have reshaped consumer expectations around speed, price perception and efficiency, steadily taking market leadership not only in value but in shopping frequency and loyalty.

Auchan Hungary (Auchan Magyarország Kft.) is not a clear winner of this transformation, but can they be one? They have the assets and the capital, as well as they can not say they do not experiment with the digital opportunities and smaller shop concepts. In this new environment, the traditional hypermarket model faces an existential question, which should be addressed by your advisory team:

> ***If shopping is no longer an "event," how can it become one again? In other words, how can Auchan reimagine hypermarket retail in a way that resonates with all generations and turns the necessity of physical shopping back into experience?***

Company

Auchan Hungary - Internal Stakeholders & Ownership

Auchan Retail is part of the Auchan Group, headquartered in France, and operates as an international grocery retailer across multiple markets. The company's model is built around large-format retail and a broad food and non-food assortment, combining competitive pricing with destination shopping missions.

On the other hand, Auchan Hungary operates as a local subsidiary within the wider Auchan Group ecosystem, while governance and strategic control in Hungary have been shaped by a recent ownership change. In late 2024, Indotek Group, a financial investor, acquired a 47% stake in Auchan Hungary, and the transaction was communicated as granting Indotek operative management of the Hungarian business. The resulting governance structure enables strategic priorities and implementation choices to be driven locally in Hungary, while remaining aligned with Auchan's group-level brand and operating standards.

Auchan Hungary, the company's Hungarian subsidiary, is in charge of carrying out the group's retail strategy in the local market and modifying it to fit the needs of Hungarian consumers, the competitive landscape, and store realities. Since 1998, Auchan has been a hypermarket chain in Hungary, providing a large selection of groceries at all of its locations. Frozen foods, fresh fruit and vegetables, prepared and fresh meat, and fish as well as alcoholic and non-alcoholic beverages, are usually considered core product categories. With a smaller presence of 5 supermarkets, the company's nationwide network is dominated by consists of 19 hypermarkets.

Business Model and Revenue Structure

Auchan Hungary operates a multi-format retail model centered on the hypermarket format, complemented by a smaller supermarket presence. The hypermarket proposition is built around breadth of assortment and destination shopping missions: customers travel to a large store to complete planned purchases efficiently in one trip, while also benefiting from product discovery across both food and non-food categories.

From a commercial perspective, the hypermarket model creates value through three mutually reinforcing levers.

1 **First, basket economics:** large-format trips are designed to generate higher basket values by combining routine grocery purchases with cross-category add-ons (e.g., seasonal offers, household items, and non-food categories).

2 **Second, commercial activation:** supplier collaboration, in-store visibility, and promotional programs can be executed at scale in a hypermarket environment, supporting both traffic generation and category growth.

3 **Third, customer identification and retention:** Auchan Hungary benefits from a large loyalty ecosystem, enabling measurable customer behavior and targeted offers. In 2025, loyalty-card purchases represented 55% of transactions, supported by more than 1 million registered loyalty cardholders. Within the loyalty base, 49% of customers are classified as regular shoppers, and over 90% of database customers visit at least once per year.

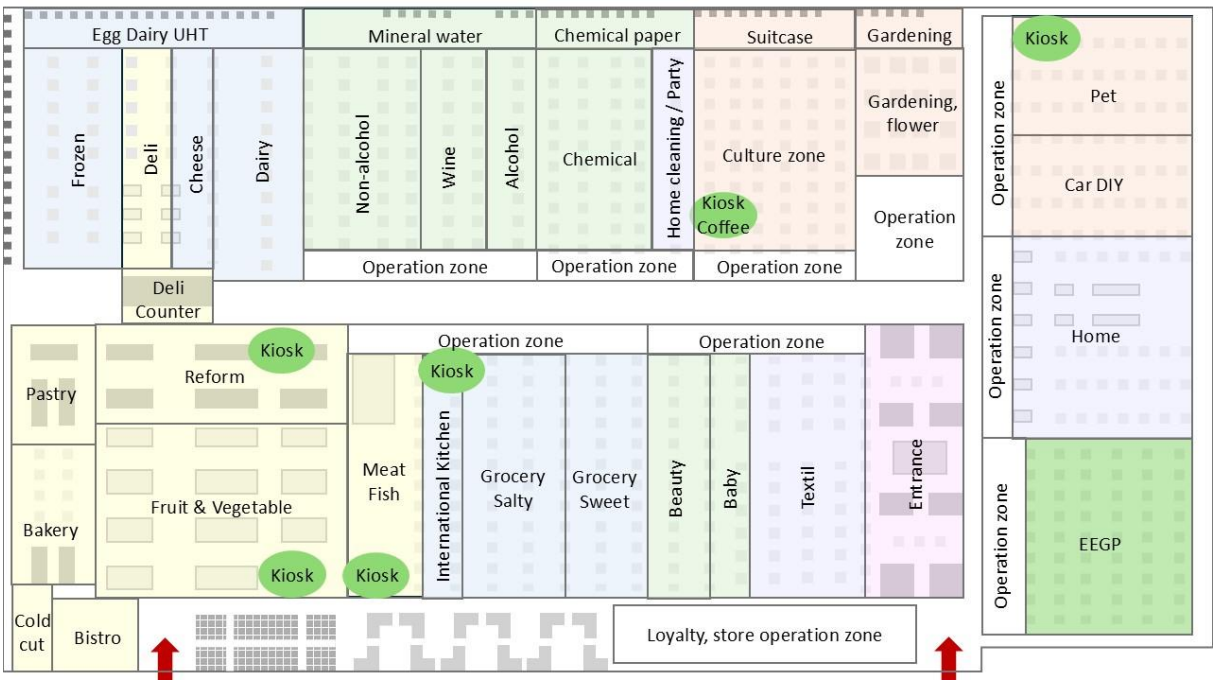

Strategically, Auchan Hungary's leadership intent is to reinvent the hypermarket format rather than replace it, and the company has indicated that a shift toward a discount-store model is not a strategic direction. Therefore, any future concept should build on the hypermarket's core strengths: wide assortment, strong value perception, and destination-shopping potential, while modernizing the customer proposition to provide more compelling reasons to visit, especially for younger customers.

Assets and Capabilities

The Hungarian logistics of the now-24 store units is led from the Üllő Hub: this 87,200 m2 facility is the largest of its kind in Hungary, and was designed to support a multi-channel commercial model. It features storage rooms at various temperature settings, ensuring that fresh, frozen, and ambient goods can be distributed from a single point. Its strategic location next to the M4 highway and M0 ring road provides direct access to the pan-European transport corridor toward Ukraine, Romania, and Serbia, making it a pivotal site for any future regional expansion beyond Hungary's borders.

Hypermarkets typically operate on ~ 9,000 – 18,000 m^2, which creates substantial flexibility in how the in-store journey is designed and how different functions (shopping, services, and experience elements) can coexist.

Shop layout

Importantly, Auchan has indicated that approximately 2,000 - 4,000 m^2 within the hypermarket footprint can realistically be repurposed, allowing meaningful pilots - such as new zones, services, or community/experience concepts - without requiring a complete store rebuild.

Furthermore, Auchan Hungary can leverage supplier partnerships beyond pricing and promotions to support assortment differentiation and in-store activation. In 2025, the company launched a local suppliers programme (to be further discussed) with Magyar Termék Nonprofit.

In parallel, Auchan has customer data and loyalty capabilities that enable targeted communication and performance tracking for new initiatives. The holders of "Bizalomkártya" translated directly to loyalty card has a number over 1 million - in a country with a population less than 10 million. This provides a practical foundation for testing whether changes in the hypermarket proposition translate into measurable shifts in visit frequency, engagement, and purchasing behavior.

Current Strategic Direction

Auchan Hungary is currently pursuing a transformation agenda, called The "Auchan 2032" Vision. In February 2026, Auchan Hungary announced a seven-year plan aiming to triple turnover by 2032 and expand national coverage through a multi-format network. This growth strategy lies on three distinguishable pillars: a new convenience store rollout, expansion of the "phygital" (physical + digital) ecosystem and last but definitely not least, hypermarket modernization, in which the company has asked for your help.

The planned rollout of smaller convenience stores is starting in 2027. These shops, typically between 70 – 150 m^2, will target the urban and rural proximity segments that have been the traditional stronghold of the discounters and domestic chains like Coop.

These new stores will be financed through Auchan Hungary's own resources and a franchise model. By using a franchise system, Auchan can scale its presence rapidly without the massive capital requirements of owning the real estate and directly managing thousands of small sites. This model also allows for better adaptation to local needs, as franchise owners are typically more attuned to their specific community's preferences.

In April 2025, Auchan opened its first unstaffed "smart store" in District 11 of Budapest near Bikás Park. This 18 m^2 Auchan GO unit represents a HUF 100 million investment in cashierless retail technology. The technology, developed in partnership with Hungarian tech startup Kende Retail Operation and leveraging systems from Chinese provider Cloudpick, utilizes 20 high-definition AI cameras and precision weight-sensor shelving. The system identifies items removed from the shelves and automatically charges the customer's pre-registered credit card through the Auchan app upon exit.

Speaking of technology, Auchan Hungary had already developed a renewed version of their application, inspired by Walmart and it is expected to launch soon.

One renewed version of their application, inspired by Walmart, is the "Auchan Coolbox", which is the concept of a refrigerated parcel machine service, located at city centers. It allows customers fresh, chilled or frozen products to be ordered online and picked up 24 hours a day, 7 days a week. This idea partially offsets the ever-lasting "last-mile delivery challenge".

Internally, leadership has articulated "reinventing hypermarkets" as the guiding strategic goal, framing the format as an asset that can be renewed through redesigned journeys, new functions, and improved customer engagement, rather than replaced by a fundamentally different retail model.

Despite the financial recovery and expansion, Auchan Hungary is taking part in Elo Group's broader "Vigilance Plan" and its sustainability goals. This translates to increasing the weight of Hungarian-produced goods to 80% or more (in product offerings) in key categories like meat, dairy and bakery, hence the partnership with Magyar Termék Nonprofit.

Concerning energy, another partnership with Helexia has secured 100 MW of photovoltaic installations for the Auchan Group, including significant projects in Hungary to power stores and logistics centers with renewable energy.

As a miscellaneous activity, Auchan is a main partner of the Municipality of Budapest in a waste reduction initiative, a new urban distribution model, the Capital Processing Center for what the capital city has secured $ 1 million USD, granted by the *Bloomberg Philanthropies' 2025-2026 Mayors Challenge*.

Importantly, Auchan Hungary's leadership intent is not to reposition the company as a hard discounter. Your strategic direction is explicit: the objective is to strengthen and renew the hypermarket proposition rather than shift to a discount-store operating model.

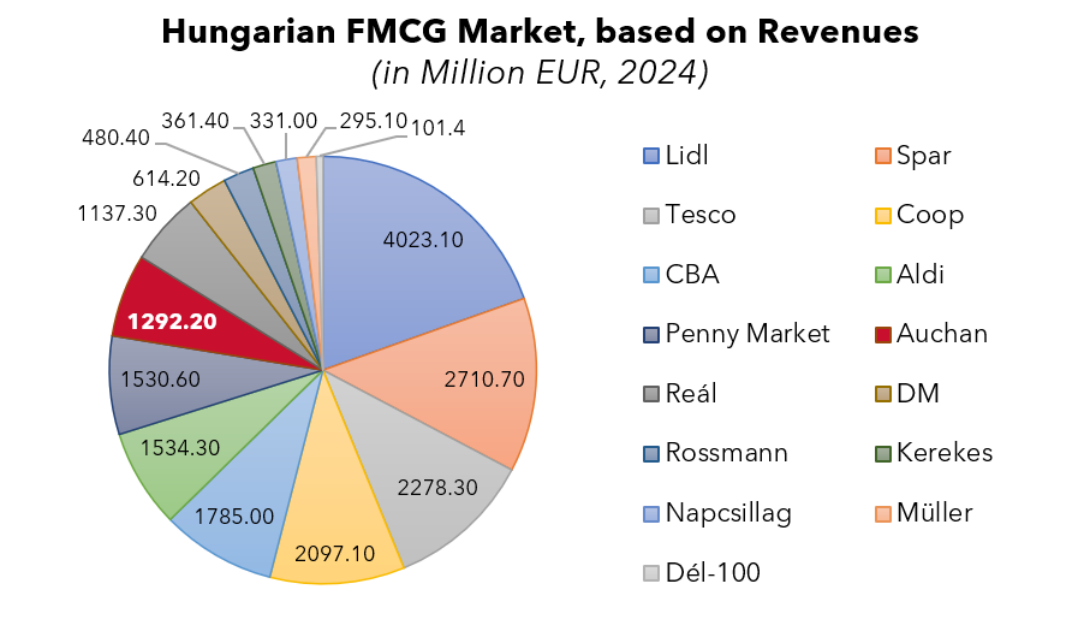

"Reinventing hypermarkets" - delivered through store renewal and network development, supported by digital modernization.

Industry and Competitive Landscape

In 2024, the Hungarian FMCG market size was approximately 20.5 billion EUR, a growth of 6.4% from the previous year. This growth rate is fully in line with the post-pandemic FMCG industry rates in other developed markets, that being between 6 and 8%. However, the long-term global CAGR of this market is estimated to be around 3-5%.

Hungary's FMCG market is no longer a simple "battle of chains" but rather a battle of formats. Discounters, supermarkets, hypermarkets, franchise convenience networks, drugstores, and online players all compete for the same household budget, but with very different operating models (store size, assortment depth, pricing approach, location strategy, and digital capability).

Source: Hungary Today

For Auchan, the strategic tension is structural. A hypermarket must deliver two promises at once: a "big basket" trip and a genuine experience. Meanwhile, competitors keep raising the baseline expectation of convenience and low prices. As a result, Auchan's hypermarkets face pressure from three directions: discount-led large-basket shopping, multi-format supermarket groups, and large-coverage chains that are attractive due to their proximity networks that capture frequent top-up missions. The most visible pressure comes from discounters, whose "right to win" is built on cost efficiency, dense footprint, and increasingly strong digital loyalty engines. At the same time, multi-format players fragment shopping occasions by covering both the big weekly trips and the smaller daily missions. For instance, Tesco and SPAR blends assortment depth (fresh, private label, non-food) with proximity formats and omnichannel convenience (e.g., Tesco communicates delivery within 5 hours).

In addition, two further forces accelerate the pressure. First, domestic proximity networks (COOP, CBA, Reál) win "quick top-up" missions with local presence. Second, substitutes are pulling categories away: drugstores like dm Magyarország and Rossmann are strengthening non-food authority, while online commerce is resetting convenience expectations with time-to-fridge delivery benchmarks.

Auchan

In this environment, the strategic decision for any hypermarket reinvention is shaped by four benchmarks: footprint and accessibility, price perception (including promotional intensity), loyalty and app penetration, and convenience (including delivery speed).

The market is not asking Auchan to "out-discount the discounters" but rather forcing Auchan to prove why the hypermarket trip still matters, by combining credible value signals with a clearly differentiated experience.

The Hungarian Reality

One of the unfavorable attributes is the applicable progressive tax rate on retailers. Established in 2020, then expanded in 2024 and 2025, the tax is calculated from gross income instead of net profits, meaning companies can face tax liabilities, even if they generated an operational loss in that respective fiscal year. From the table below, the tax brackets can be seen, and the conclusion is clear: this tax structure is tiered to disproportionately target high-volume, international chains. Last year this rule was extended to online platform operators and foreign traders, even without a local branch. This taxation potentially violates the right of establishment within the European Union Single Market, but it is still part of the national fiscal strategy, and retailers are forced to adjust their prices and investment cycles to accommodate it.

Tax Rates in Hungary

Revenue Tier (Annual Gross Sales in HUF)	Applicable Progressive Tax Rate (2025)
Up to 500 Million	0%
500 Million to 30 Billion	0.1%
30 Billion to 100 Billion	0.4%
Above 100 Billion	2.7% to 4.5% (depending on specific legislative amendments)

Source: TAXAND

From a corporate point-of-view an other government-issued hurdle is the so-called "margin squeeze/margin cap" or "árrésstop" in Hungarian. One year ago, to tackle the "unjustified and excessive price hikes", regulators limited retail margins of initially 30 basic food categories to a maximum of 10% above its purchase price. By the end of 2025, the "margin squeeze" was already expanded to nearly 100 items, because the Hungarian food inflation remained high, above European average. This ongoing situation prevents retailers from passing rising operational costs such as energy, logistics and human resources onto consumers.

Shopping Trends

Even though there is no one-size-fits-all customer persona for Auchan nor for the industry, there are a few trends that seem to be overarching and deterministic. Bifurcation is prevalent, meaning Hungarians feel the need to save money, but they desire healthy, high-quality food at the same time. Inflation concerns among all customer groups grew 11% on average compared to last year, so price remains the primary driver of preference. This consumer mindset makes this competition especially unforgiving, because on the other hand, promotion share rose to 32.2%, meaning "*value*" is constantly renegotiated at the shelf level through discounts, coupons, and loyalty mechanics.

Nevertheless, price sensitivity did not lead to negligence towards quality: 50% of consumers are worried about pesticides, ultra-processed foods and artificial ingredients. The opportunity for fresh produce, dairy and health supplements is massive, over 60% of customers are planning to increase their spending in these categories. The aforementioned local sourcing initiative of Auchan can be an enabler: the mostly Hungarian-produced goods in these categories (generally) fit none of the main concerns of customers.

Moreover, the presence of e-commerce in the Hungarian grocery market cannot be overlooked. E-grocery has developed from a secondary convenience into a fundamental pillar. The average modern consumer increasingly demands an omnichannel approach, which Auchan's "phygital" initiatives are aiming to grasp. The tech-savvy demographics of Gen Z and the Millennials demand mobile-first experiences as well as personalized integration. Consequently, even when the business focus lies elsewhere, a company's e-commerce capabilities serve as an engine for brand stickiness and data-driven consumer insights.

Customer Personas

Auchan's customer base is structured around six personas identified by the company with different value drivers (see Appendix). The largest segment is represented by the persona named "Bargain-Hunter Ágota" (24% of shoppers), who is highly price-sensitive and promotion-driven, followed by "Experience-Seeker Éva" (21%), who enjoys discovery, trends, and trying new products. "Local Helga" (20%) values domestic sourcing and familiarity, while "Conscious Tibor/Tekla" (16%) focuses on quality, health, and sustainability. This persona type is even willing to pay a premium for trusted products. "Get-it-Done Lóri" (16%) views shopping as merely a task to complete quickly and efficiently. A smaller but maybe strategically important persona, "Digital Borka" (2%), represents tech-savvy, digitally engaged consumers.

Auchan offers its customers a complex and comprehensive shopping solution with an efficient layout, a wide range of product assortments, and affordable prices. However, sooner or later, it might come to the day when it cannot prioritize all of the segments and has to choose whose wishes it wants to satisfy – for instance, when it is about the in-store experience.

Changing Game

Over the last decade, discounters rewired expectations around speed and price perception, and online players turned convenience into a countdown measured in minutes. Shoppers have learned to monitor prices, control basket value, and switch stores without hesitation, while promotions and loyalty mechanics have become the daily language of value. The old shopping event fragmented into multiple missions: a top-up close to home, a quick stop on the way back from work, and a delivery when time runs out. For Gen Z and Millennials in particular, these behaviors are even more pronounced: they are mobile-first, convenience-driven, and quicker to switch brands or stores if the experience feels slow, outdated, or not worth the trip.

Challenge and Vision

Auchan competes in a market where customer expectations have unfavourably shifted across formats. But the company has what many challengers do not: scale, space, and the willingness to invest in reinvention.

To start with, Auchan Hungary's management faces a strategic challenge: how to reinvent the hypermarket format to regain relevance among all generations (including Gen Z and Millennials, who have increasingly different shopping habits nowadays) in a market increasingly dominated by discounters and convenience-focused players. The goal is not to reposition Auchan as a hard discounter but to modernize and potentially completely rethink the hypermarket proposition by creating a compelling reason to visit: blending destination shopping with experience driven by innovative retail solutions that respond to emerging customer expectations.

With a clear intent for store redesign using the 2,000–4,000 m² of extra space per store and a higher risk appetite for taking steps towards redefining the Hungarian retail landscape, management is now eager to find out-of-the-box concepts for product display and experience enhancement. One already implemented initiative that serves as an example is the avocado ripeness scanner, which not only reduces waste but also enhances customer confidence and adds a layer of interaction to a routine purchase decision.

However, the case extends well beyond avocados. Your advisory is tasked with answering the following question:

How can Auchan reimagine hypermarket retail in a way that resonates with all generations and turns the necessity of physical shopping back into an experience?

Task 1

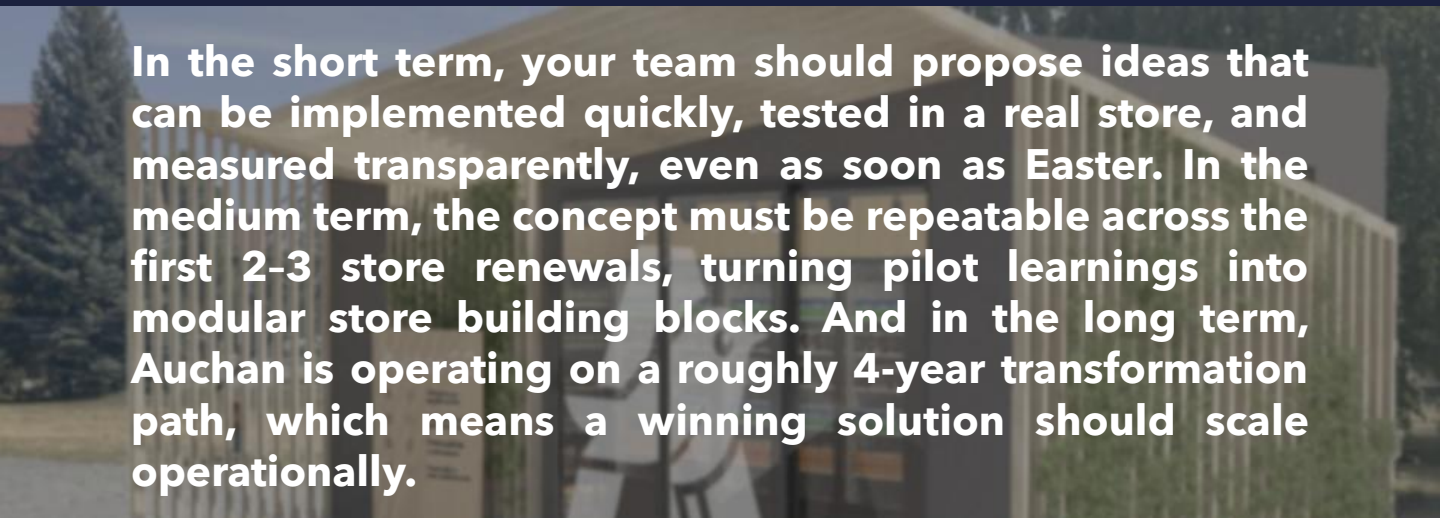

Design a scalable concept with innovative ideas for repurposing the 2,000–4,000 m² space to enhance customer experience:

- Evaluate international best practices, use cases and innovative retail solutions for a more interesting physical display of goods or other experimental designs, and select the most suitable ones for the Hungarian market
- Outline how the proposed concept can be integrated into the overall store journey and which customer segments each of your ideas appeal to and how you can engage them even better (in your analysis, indicate which persona types you focus on and why). The more people you capture, the better.

Task 2

Detail the implementation and impact of your project:

- Draft a timeline and an execution plan on how your strategy can be piloted in the next 2–3 store renewals and then be scaled.
- Demonstrate how the solution delivers measurable impact on transaction growth, basket size, and loyalty/engagement

In the short term, your team should propose ideas that can be implemented quickly, tested in a real store, and measured transparently, even as soon as Easter. In the medium term, the concept must be repeatable across the first 2–3 store renewals, turning pilot learnings into modular store building blocks. And in the long term, Auchan is operating on a roughly 4-year transformation path, which means a winning solution should scale operationally.

Out-of-Scope Solutions

To ensure strategic focus, some potential solution paths are restricted or excluded from this case.

1.Your strategy must preserve the hypermarket format (a shift toward a discount or small-format operating model is not considered).

2. Any form of store closure strategy, footprint downsizing, or exit from large-format retail that avoids addressing the 2,000–4,000 m² repurposing opportunity is ruled out.

3. You should primarily focus on transforming the existing hypermarkets. Building entirely new store formats from scratch apart from the existing stores is not your task in this case.

4. Proposals driven by purely online-shopping transformation (e-commerce acceleration without physical store reinvention or designing a brand-new application) are not within scope. On the other hand, you are welcome to add online or virtual elements into your strategy.

5. Solutions limited to marketing campaigns, communication repositioning, or brand messaging changes without structural in-store transformation are not sufficient.

6. Strategies based on solutions that cannot be realistically piloted in the next 2–3 store renewals do not capture the objective of the case. However, if you find an innovative trend or idea, which will only be relevant in 2-3 years, you can include it besides the ones that can be implemented quickly.

7. Targeting Gen Z or one demographic group at the expense of all other segments is not viable. While Gen Z and Millennials are important, the hypermarket must remain broadly relevant. With justification in your analysis, you can decide not to focus on satisfying certain customer segments, though.

8. You can add potential product categories if there is a demand for them and if they are essential elements in enhancing the customer experience, but do not focus on changing the product assortment.

9. Since both the strategic and operational decisions are made locally, it is unnecessary to consider possible intertwining from the umbrella-company, Elo Group, supervised by the Mulliez family.

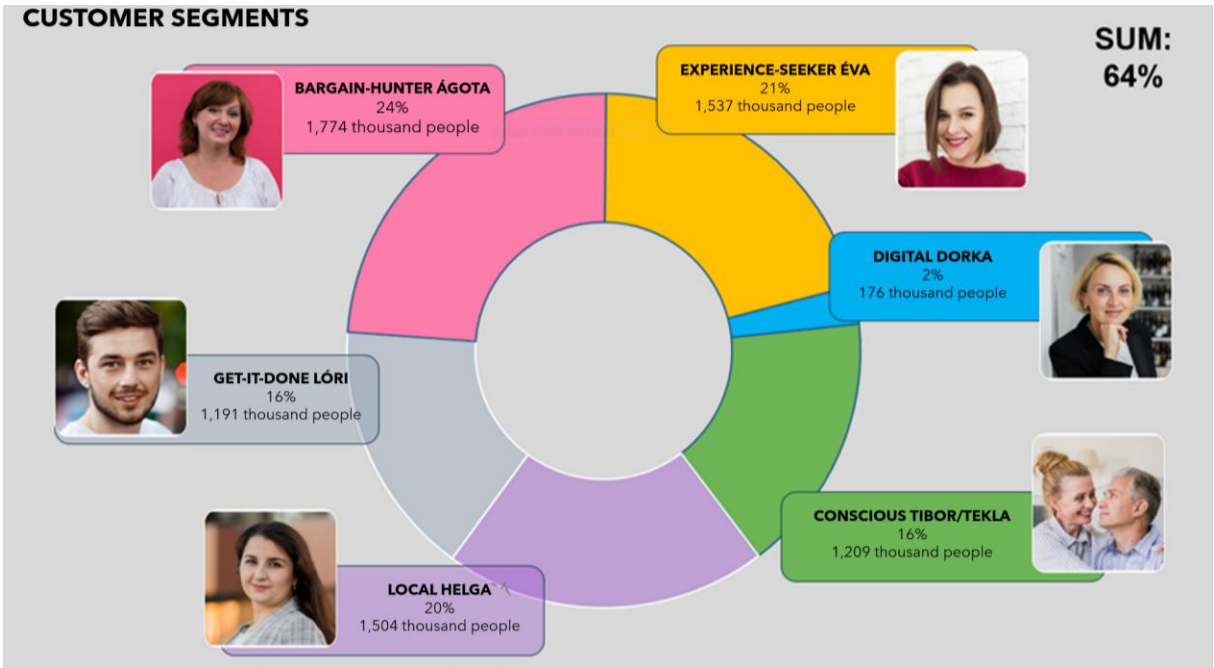

Appendix

Direct Competitors

Retail chain	store number				Key characteristics	Motto / positioning
	2022	2023	2024	2025		
Penny	228	231	238	241	600 m² sales area, standardized format nationwide coverage	PENNY positions itself as a discount retailer that combines low prices with a strong emphasis on Hungarian products.
Lidl	197	202	211	216	Discount format, ~1,100 m², nationwide coverage	Lidl has shifted its brand message toward a lifestyle- and feeling-driven proposition, moving from "Because it's worth it" to a more emotional positioning.
Aldi	163	172	182	185	Discount format; ~900 m²; nationwide coverage	ALDI is typically located close to Lidl stores, reinforcing a direct head-to-head competitive placement strategy.
SPAR Supermarket	308	300	282	285	600–1,000 m² units, nationwide coverage	SPAR Supermarkets focus on a fresh-food-heavy assortment and a broad selection of food products.
INTERSPAR Hypermarket	35	36	36	36	3,000–4,000 m² hypermarket format	INTERSPAR hypermarkets are usually located in malls and larger cities, offering a wide food assortment alongside a non-food range.
City SPAR	32	32	29	39	~300 m² convenience format, with Bistro	City SPAR is positioned as quality-focused and operates only in Budapest units.
